Test Case 3: Move Object Creation

Prompt to ChatGPT

> Generate a JUnit test for the Move class constructor.

ChatGPT Response

Java

```java
@Test
void testConstructorStoresPositions() {
    Position from = new Position(1, 2);
    Position to = new Position(3, 4);

    Move move = new Move(from, to);

    assertEquals(from, move.getFrom());
    assertEquals(to, move.getTo());
}
```

How we checked it

- Created a Move object manually.
- Verified the source and destination positions were stored correctly.
- Ran the test successfully in IntelliJ.

Corrections made

- ChatGPT assumed the existence of the `Position` class.
- Adjusted imports and constructors to match the actual implementation.

Test Case 3: Move Object Creation

Prompt to ChatGPT

> Generate a JUnit test for the Move class constructor.

ChatGPT Response

Java

```java
@Test
void testConstructorStoresPositions() {
    Position from = new Position(1, 2);
    Position to = new Position(3, 4);

    Move move = new Move(from, to);

    assertEquals(from, move.getFrom());
    assertEquals(to, move.getTo());
}
```

How we checked it

- Created a Move object manually.
- Verified the source and destination positions were stored correctly.
- Ran the test successfully in IntelliJ.

Corrections made

- ChatGPT assumed the existence of the `Position` class.
- Adjusted imports and constructors to match the actual implementation.

Test Case 2: Board Type Enumeration

Prompt to ChatGPT

> Create a JUnit test that verifies all board types exist in the BoardType enum.

ChatGPT Response

Java

```java
@Test
void testEnumContainsEnglish() {
    assertNotNull(BoardType.ENGLISH);
}

@Test
void testEnumContainsDiamond() {
    assertNotNull(BoardType.DIAMOND);
}

@Test
void testEnumContainsHexagon() {
    assertNotNull(BoardType.HEXAGON);
}
```

How we checked it

- Compared the enum values in `BoardType.java`.
- Ran the tests successfully using JUnit 5.
- Verified that each board type could be selected in the application.

Corrections made

- No logic changes were required.
- Updated imports and package declarations to match our project.
